

Agilysys

Agilysys InfoGenesis™ Mobile 2.1: POS Functionality in the Palm of Your Hand

Agilysys InfoGenesis™ Mobile is a mobile point-of-sale (POS) solution that seamlessly integrates with Agilysys InfoGenesis POS software. The application is reliable, sleek and easy to learn, with a user interface that's intuitive and simple to configure.

The mobile paradigm offers an opportunity to change a server's experience with point-of-sale software, creating a workflow and experience that enhances the natural guest/server interaction rather than disrupting it. For instance, users can use the interactive check view to add, modify or change an order on the fly, which is paramount in a conversational, face-to-face engagement with a customer.

Features in InfoGenesis Mobile 2.1:

- Interactive check view
- Check type support
- Typed and menu button special instructions
- Modifiers support
- Choice group support
- Seat and covers support
- Table or location assignment

- Workflow supports single pass and multi pass
- Electronic itemized check display for paperless environments
- Split payment
- Shift4® credit card authorization support
- Room charge authorization and tender
- Electronic signature capture for credit card and room charge
- Cash tender
- Bluetooth® and IP printing support for paper environments
- Retry save when check can't save to system

Bottom Line Benefits/ROI

- Servers can remain in their sections instead of running back and forth between the POS terminal and their customer. This expands their coverage area, which lowers labor costs and increases tip potential. Bigger sections mean fewer servers on duty.
- Dispatching orders as servers receive them improves the guest experience and can increase check averages. There is no lag time for the kitchen or bar to begin preparing the order, which eliminates backup at the POS terminal and improves pacing for prep areas.
- Greater opportunity for upselling, additional orders lead to increased revenue.

Foodservice providers are continually looking for ways to leverage new technology to streamline their operations, increase employee productivity and provide better service. The growing use of smartphone devices has created a tremendous opportunity for restaurants to add mobility to their menu, but choosing the right technology in an increasingly competitive market can be a challenge.

The application is reliable, sleek and easy to learn, with a user interface that's intuitive and simple to configure.

Hardware Requirements

InfoGenesis Mobile is certified to run on the following hardware:

Asus Nexus 7

Model Number	NEXUS7ASUS-2Bxx, Koo8
Minimum operating system	Android 4.3, Jelly Bean
Network capability	Wifi only
